

● Open to AOSP & Senior Android roles

Ashish Kumar Yadav

Senior Android Developer & AOSP System
Engineer

I build Android from the ground up — custom OS for enterprise tablets, SystemUI, home launchers, Recents stacks, split-screen, and everything in between. 7+ years turning low-level frameworks into polished products.

Engineering Android from chip to UI

I'm a **Senior Android Developer** with deep expertise spanning the full Android stack — from **AOSP build systems** and kernel configs to polished user-facing experiences. Currently at **HP Inc.**, I build a custom Android OS for enterprise tablets working directly in the AOSP tree.

I've built the **entire Recents/Overview stack**, a full **custom home launcher**, **split-screen multi-window** support, **app pinning**, and system-wide animations — all from scratch inside SystemUI and Framework/Base.

Before HP, I shipped production banking and field-service apps used by millions across India and the UK, working with **Kotlin**, **Jetpack Compose**, **MVVM**, and clean architecture patterns.

AOSP Build Expert

repo, soong, make, product makefiles, vendor blobs, RPi targets

SystemUI Engineer

Custom launcher, Recents stack, animations, split-screen, app pinning

App Developer

Kotlin, Compose, MVVM — banking & fintech grade apps

Software Application Developer

📦 Custom AOSP Tablet Development (Android)

Building a fully customized Android OS for HP's enterprise tablet portfolio, working directly in the AOSP tree from board bring-up through GMS certification.

- Owned end-to-end **AOSP build process** — repo manifests, product makefiles, Soong build rules, and vendor blobs for custom tablet hardware.
- Set up **Raspberry Pi (RPi) AOSP builds** as development & validation targets; managed kernel config, device trees, and boot image generation.
- Led **Android version migrations** — ported customizations across major Android releases, resolving API deprecations and framework breaks.
- Architected a **custom home launcher from scratch** : app-grid, widget host, dock, quick-settings shortcuts, and enterprise MDM policy hooks.
- Built the **full Recents / Overview stack from scratch** inside SystemUI — task thumbnails, swipe-to-dismiss, task locking, and animation interpolators.
- Implemented **split-screen (multi-window)** : divider drag handle, resizing callbacks, min-size enforcement, per-app multi-window flags.

‣ Engineered **system-wide UI animations** — window transitions, enter/exit animators, shared-element continuity effects.

‣ Built **app pinning (screen pinning)** end-to-end: SystemUI lock overlay, back/home interception, secure unlock confirmation.

‣ Integrated **Google Mobile Services (GMS)** ; optimized system partitions and boot flow for faster cold-start times.

‣ Deployed privileged system apps for user profile management and device policy enforcement (Device Owner / MDM hooks).

Android Developer

📦 Microfinance Loan Application for HDFC Bank

MFI application enabling HDFC Bank to reach customers in remote areas for unsecured loans — Individual, Joint Liability, and Self Help Group (SHG) products.

‣ Sole owner of **7–8 core modules** : APY, Manage Groups, Customer 360, SHG Loans.

‣ Integrated **OCR-based & physical-signature document upload** with server-side validation.

‣ Re-architected **MVVM + Jetpack** to **Compose** , cutting screen load time ~35%.

‣ Eliminated critical memory leaks with LeakCanary, reducing ANR rate ~40%.

‣ Introduced **build flavors** for staging/production, streamlining QA cycles.

Senior Systems Engineer

📦 Kinetic & DBB (Digital Business Banking) — HSBC, UK

- ▶ Implemented **Payment Initiation Services (PISPs)** — SIP and Fast Debit Payments (FDP).
- ▶ Streamlined **International Payments** journey, reducing user steps from 9 to 5.
- ▶ Delivered **Multi-Bill Payments (MBP)** enabling batch settlement in one session.
- ▶ Contributed **account convergence** unifying Kinetic & DBB under a shared data layer.
- ▶ Hardened security via **SSL pinning and end-to-end encryption** per HSBC standards.

Android Developer

allGeo – Field Service Management

Time & task tracker for enterprise field service management — scheduling, tracking, and reporting.

- ▶ Led feature development and releases; reduced release cycle from bi-weekly to weekly.
- ▶ Implemented **real-time location tracking** with Fused Location Provider and WorkManager.
- ▶ Integrated **Firestore In-App Messaging, Remote Config, and Deep Linking**.
- ▶ Designed Room DB CRUD with **offline-first sync** for low-connectivity areas.
- ▶ Maintained >99.5% crash-free session rate through proactive crash triage.
